A definition of Compounding in tire manufacturing:

“Rubber compounding is the science of selecting and combining ingredients to produce a useful polymer which will have the characteristics sufficient to perform under the conditions in which the end product is intended to be used”

COACH MASTER OTR Tires can be custom fabricated with compounding specially formulated for the specific conditions demanded of tires operated at your site.

H1	Heat Resistant - suitable for high speeds
H2	Heat Resistant Major with some Cut Resistance
R1	Heat and Cut Resistant 50/50
C1H	Cut Resistant Major with some Heat Resistance
C1	Cut Resistant mainly for loaders and port use
